## Flag Pole Installation

#1 Lay your flag pole out as pictured.

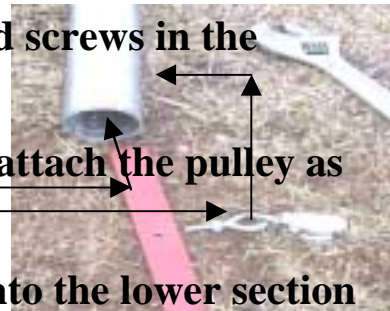

#2 Remove the ground mount tubes and insert a bolt through the bottom hole of the ground mount and the bottom hole of your flag pole as shown.

#3. Attach the halyard stay as pictured with the two included screws in the predrilled holes.

#4. Slide the nut block down inside the top of your pole and attach the pulley as shown. Tighten the nut on the outside.

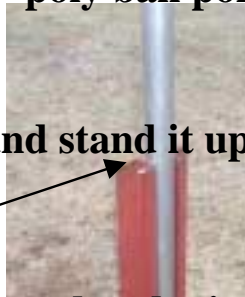

#5. Assemble pole by slipping the middle section over and onto the lower section and the upper section over and onto the middle section. NOTE: Be sure that your top swivel and lower halyard stay are in line to prevent rope from twisting around the pole.

#6. Tie on rope snaps with a single knot at the middle of the rope to match your flag grommets and secure with a little hot melt glue or epoxy. Lay halyard out as shown and route the rope through the pulley so that the flag snaps are on the rope which are farthest away from the pole.

#7. Push the 4" poly ball pole topper over the top of your pole.

#8. Lift pole and stand it up as shown. Insert upper bolt through the ground mount and pole.

#9. Tie off halyard and trim any excess rope. NOTE: The knot that ties your halyard together should be at this location with the flag raised. The flag can now be attached and hoisted.
